

The Nordic app looks for/needs the firmware update file to be in ZIP format.

If you are downloading the new firmware to your Macintosh PC you need to insure that it does not open the Zip file automatically after downloading (Macintosh PC's open ZIP files by default).

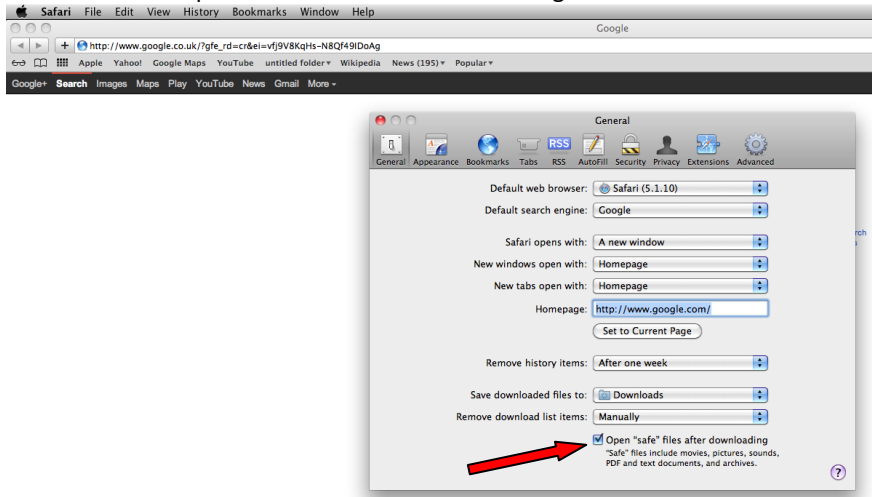

For downloading LIMITS firmware upgrades to a Macintosh PC...

1. Go to safari and select "Preferences"

2. A window will appear...

Notice that the Open "safe" files after downloading is checked.

This needs to be un-checked (allowing a ZIP file to be downloaded without opening).
Uncheck and close window.
